Assignment Submission Guidelines

SCSE2103: Data Structures and Algorithms • Section 03 • Session 2026/2027/1

Target Repository
Dr-Khatib / SCSE2103-03-DSA-26271

> ⚠ **Mandatory Workspace Isolation Policy**
> You are strictly permitted to add or update files inside your designated matric directory (**./<MATRIC_NUMBER>/**). Any Pull Request modifying the repository root, course syllabus, the root README, or another peer's directory will be automatically closed and rejected.

STEP 1 Fork the Main Repository to Your Personal Account

Navigate to the official course repository on GitHub: **https://github.com/Dr-Khatib/SCSE2103-03-DSA-26271**. Click the **Fork** button in the upper right. Ensure your personal account is selected as the owner and click **Create fork**.

STEP 2 Clone Your Personal Fork to Your Local Machine

Open VS Code Terminal or Git Bash, then clone your fork directly onto your computer (replace YOUR_USERNAME with your actual GitHub username):

```
git clone https://github.com/YOUR_USERNAME/SCSE2103-03-DSA-26271.git
cd SCSE2103-03-DSA-26271
```

STEP 3 Place Your Assignment Inside Your Assigned Folder

Locate your folder named after your matric card number (e.g., A25CS0001). Create an exercise subfolder and save all source files (`.cpp`, `.h`, and PDF reports) exclusively inside it:

```
SCSE2103-03-DSA-26271/
├── A25CS0001/              <-- YOUR FOLDER ONLY (Put your Lab/Exercise here)
│   ├── README.md
│   └── Lab1/
│       ├── exercise1.cpp
│       └── report.pdf
├── A25CS0002/              <-- STRICTLY DO NOT TOUCH
└── README.md               <-- STRICTLY DO NOT TOUCH
```

STEP 4 Stage, Commit, and Push Directly to Your Main Branch

Run `git status` to confirm no outside files are tracked. Stage your folder and push directly to your fork's main branch:

```
git status
git add A25CS0001/
git commit -m "feat(A25CS0001): submit Lab Exercise 1"
git push origin main
```

STEP 5 Open a Pull Request (PR) to the Course Repository

Go to your fork's GitHub repository page in your browser. Click the green **Compare & pull request** banner at the top of the repository file list.

1. Branch Target Alignment

Base repo: **Dr-Khatib/SCSE2103-03-DSA-26271** (`main`)
Head repo: **YOUR_USERNAME/SCSE2103-03-DSA-26271** (`main`)

2. Required Pull Request Title

Format: `[Submission] <MATRIC_NO> - <TASK_NAME>`
Example: `[Submission] A25CS0001 - Lab Exercise 1`

Fill in the description with your Full Name, Matric Number, and a summary of completed requirements. Before clicking submit, select the **Files changed** tab on GitHub to verify that only paths under `./<MATRIC_NUMBER>/` appear. Once verified, click **Create pull request**.

STEP 6 Sync Upstream Changes for Subsequent Assignments

Before beginning any new assignment, sync your fork with instructor updates to prevent merge conflicts. Run these commands from your local workspace:

```
# Configure the upstream remote (execute once only)
git remote add upstream https://github.com/Dr-Khatib/SCSE2103-03-DSA-26271.git

# Pull the latest announcements/templates into your local main branch
git checkout main
git pull upstream main
git push origin main
```

Submission Quality Assurance Checklist

- [✓] **Root Directory Cleanliness:** No extra files (e.g., `.DS_Store`, `a.out`, `.exe`) in root.
- [✓] **Target Scope:** All committed files reside strictly within `./<MATRIC_NO>/`.
- [✓] **Compilable Code:** C++ source code compiles cleanly using standard g++ or VS Code settings.
- [✓] **Standardized PR Title:** Follows `[Submission] <MATRIC> - <TASK>` exactly.
